REQUEST FOR CORRECTED FILING RECEIPT

1. Attached is a copy of the official filing receipt received from the PTO in the above application for which issuance of a corrected filing receipt is respectfully requested.
2. There is an error with respect to the following data, which is:
☐ incorrectly entered and/or ☒ omitted

Error In	Correct Data
1. <input type="checkbox"/> Applicant(s) Name	1.
2. <input type="checkbox"/> Applicant(s) Address	2.
3. <input type="checkbox"/> Attorney Docket No.	3.
4. <input type="checkbox"/> Title	4.
5. <input type="checkbox"/> Filing Date	5.
6. <input type="checkbox"/> Serial Number	6.
7. <input type="checkbox"/> Foreign/PCT Appln. Reference	7.
8. <input type="checkbox"/> Small Entity vs. Large Entity	8.
9. <input checked="" type="checkbox"/> Other Domestic Priority Data	9. , which claims priority from 10/041,047 1/7/02, now US Pat. 6,581,456 6/24/03

3. As the Patent and Trademark Office made the error(s), we believe no fee is due. Should any fees be required, please charge Deposit Account No. 24-0025.

SUBSTRATE BENDING STIFFNESS MEASUREMENT
METHOD AND SYSTEM

[0001] This is a divisional of U.S. Appln. No. 10/440,696 filed May 19, 2003, which claims priority from U.S. Appln No. 10/041,047, filed January 7, 2002, now U.S. Patent No. 6,581,456, issued June 24, 2003 by the same inventors and same title, and claims priority therefrom. This divisional application is being filed in response to a restriction requirement in that prior application.

[0002] Especially with the advent of high speed xerographic reproduction machines wherein copiers or printers can produce at a rate in excess of one hundred and twenty pages per minute (PPM), there is a need for sheet handling systems to feed paper or other substrate through each process station in a rapid succession in a reliable and dependable manner in order to utilize the full capabilities of the reproduction machine. These sheet handling systems must operate flawlessly to virtually eliminate the risk of damaging the substrate and to minimize machine shutdowns due to misfeeds or multifeeds. It is in the initial separation of the individual sheets from the substrate stack where the greatest number of problems occur.

[0003] One of the sheet feeders best known for high speed operation is the top vacuum corrugation feeder with front air knife. In this system, a vacuum plenum with a plurality of friction belts arranged to run over the vacuum plenum is placed at the top of a stack of sheets in a supply tray. Several fluffers are located around the perimeter of the stack for injecting air into the top of the stack. When vacuum is supplied to the vacuum plenum, the resulting vacuum field draws one or more sheets against the friction belts. At the front of the stack, an air knife is used to inject air into the acquired sheets to separate the top sheet from the remainder of the sheets which then are pushed down onto the stack. In operation, the vacuum pulls one or more sheets up and acquires them, and then air is injected by the air knife toward the acquired sheets to separate the top sheet. Following separation, the belt transport drives

Receipt is acknowledged of this regular Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Filing Receipt Corrections, facsimile number 703-746-9195. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).
